

## Dr. Pravin K. Oogarah

M.B Ch.B (Manchester) FRCPath (U.K.)

CONSULTANT PATHOLOGIST AT HEALTHCHECK MEDICAL LABORATORY

# HISTOPATHOLOGY REPORT

**PATIENT:** Marie Noellela BOODOO

**AGE/D.o.B:** 43 yr      **SEX:** F

**SPECIMEN:** Polypoid mass from posterior lip of cervix      (PP0578/21)

**DOCTOR :** Dr. Wong Ten Yuen      (NCF)

### MACRO

Multiple polypoid and irregular pieces of grey brown tissue, 50x35x25mm in aggregate. The largest piece is polypoid and 35mm in greatest dimension.

### MICRO

Sections show features suggesting the so-called mullerian adenosarcoma. It shows a biphasic neoplasm with a benign epithelial component and a cellular malignant spindle cell component with scattered mitoses. A tiny fragment of unremarkable ectocervical tissue is noted. No endocervical tissue is seen. One fragment shows marked chronic inflammation with predominance of plasma cells.
