HISTOPATHOLOGY

CNS BIOPSY WITH REFLEX IHC

CNS BIOPSY WITH REFLEX IHC

Surgical Pathology No. S -2266-21

Clinical Details: Pineal region tumor.

Received specimen in formalin in two container labelled as

- 1) Frozen
- 2) Tumor tissue

Gross Examination:

1) Frozen - Received 1 grey brown soft tissue piece measuring 0.3x0.2x0.2 cm. Representative tissue processed in 1 block.
Frozen remaining tissue - A (All processed).

2) Tumor tissue - Received single grey brown soft tissue bit measuring 1x0.8x0.6 cm. All processed in A and B blocks.

Microscopic Examination : Sections examined show a tumor composed of monomorphic large round cells with centrally placed round nuclei having granular chromatin and clear to pale eosinophilic moderate amount of cytoplasm. Brisk mitosis and prominent eosinophilic nucleoli also noted.

Tumor cells are arranged in nodular pattern separated by vascular septa and scattered mature lymphocytes.

Immunohistochemistry:

PLAP - Positive
CD117 - Positive
SALL4 - Positive
Oct 3/4 - Positive
Synaptophysin - Negative
Chromogranin - Negative
Neurofilament - Negative
GFAP - Negative
S100 - Negative
Ki67 - 90% in highest proliferative area

Opinion : Germinoma, Pineal region tumor.
